

The main image was not printed

I found out, that your printing image was limited. When I collapsed the main program, it was printed.

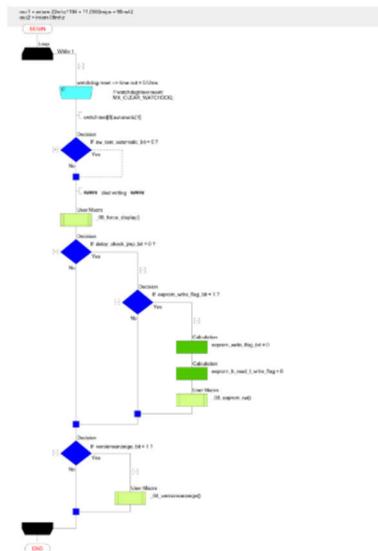

Main program not printed:

Collapsed program printed:

Macro name: Main

osc1 = extern 22mhz1184 = 11,0592mips = 90ns42
osc2 = intern 08mhz

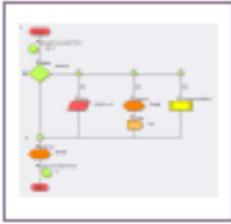

Here it is not printed:

Make information about your project available in HTML forma

Here it is printed:

Save the current macro as an image (Main)

The HTML shows:

```
\file_07.png' style='width:0; height:0;'></a><BR>
```

File_07.png (main) is not generated and declared as width:0 and high:0

When I generate the file alone and put in here the name and the size, then it would be seen.

Actual size of the „main“ image is: 10504 x 6914

Are there limitations from your HTML-Converter?
